Chapter 1

Namespace Index

1.1 Packages

Here are the packages with brief descriptions (if available):

ReversePolishCalculator	7
--------------------------------	---

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

ReversePolishCalculator.ReversePolishCalculator

The class takes a string as input, and if the string is in the format of a reverse Polish calculator expression, then it will calculate and return the result. Features Can handle the operators: +, -, *, /, sqrt, cos, sin and pov (^) Can handle negative numbers if written in the form -x Tokens are separated by a whitespace. If a "token" includes a letter then the token is ignored

Chapter 4

Namespace Documentation

4.1 Package ReversePolishCalculator

Classes

- class **ReversePolishCalculator**

*The class takes a string as input, and if the string is in the format of a reverse Polish calculator expression, then it will calculate and return the result. Features Can handle the operators: +, -, *, /, sqrt, cos, sin and pow (^) Can handle negative numbers if written in the form -x Tokens are separated by a whitespace. If a "token" includes a letter then the token is ignored.*

- class **ReversePolishCalculatorTests**

Chapter 5

Class Documentation

5.1 ReversePolishCalculator.ReversePolishCalculator Class Reference

The class takes a string as input, and if the string is in the format of a reverse Polish calculator expression, then it will calculate and return the result. Features Can handle the operators: +, -, *, /, sqrt, cos, sin and pov (^) Can handle negative numbers if written in the form -x Tokens are separated by a whitespace. If a "token" includes a letter then the token is ignored.

Static Public Member Functions

- static decimal **CalculateExpression** (string rpce)

Calculates the input reverse calculator string expression. Can handle a number of faulties.

5.1.1 Detailed Description

The class takes a string as input, and if the string is in the format of a reverse Polish calculator expression, then it will calculate and return the result. Features Can handle the operators: +, -, *, /, sqrt, cos, sin and pov (^) Can handle negative numbers if written in the form -x Tokens are separated by a whitespace. If a "token" includes a letter then the token is ignored.

5.1.2 Member Function Documentation

5.1.2.1 static decimal ReversePolishCalculator.ReversePolishCalculator.CalculateExpression (string *rpce*) [static]

Calculates the input reverse calculator string expression. Can handle a number of faulties.

Parameters

<i>rpce</i>	A String in the Reverse Polish Calculator expression format
-------------	---

Returns

0 if faulty otherwise the result

The documentation for this class was generated from the following file:
